

AIOU ZERO EMISSION VEHICLES (ZEV) POLICY

AIOU ZERO EMISSION VEHICLES POLICY

Description:

AIOU aims to improve the transportation infrastructures in its growing and developing campus in line with sustainability principles. Transportation on the campus is provided by zero emission vehicles. Except for special circumstances, private vehicles are not allowed to enter the campus. Bicycles are available for students and staff. Campus residents can bring their own bicycle to the campus, too. Parking and charging areas as well as departure and arrival routes for bicycles and electric vehicles on campus are identified. Drivers must follow the defined routes and the security instructions. Continuous improvements are made at AIOU to reduce emissions and air pollution. In this direction, transportation within the campus is provided by electric vehicles and bicycles. Security measures are at the highest level at the campus gates and not every vehicle is allowed to enter the campus. There are bike paths and parking spaces for bikes on campus.

In this context, AIOU is committed to;

- To tell everyone about zero emissions, the importance of air pollution, the understanding of clean environment, with events and seminars to be organized both inside and outside the university.

- Within the university campus, reducing fuel consumption per motor vehicle, encouraging the use of environmentally friendly alternative fuels, reducing air pollutants and greenhouse gas emissions,
- Providing fast guidance to parking lots with parking guidance systems
- Establishment of safe bicycle leaving areas in open parking lots
- Providing the electrical connection infrastructure that will meet the necessary energy needs of vehicles in the campus
- Developing environmentally friendly, highly energy efficient integrated transportation systems that meet the needs and expectations.
- Encouraging environmentally friendly tools and practices.
- To create special areas within the campus where bicycles will be safe.
- To reduce environmental pollution by using electric vehicles in the supply to the buildings in the campus
- Encouraging the use of zero-emission vehicles by keeping electric scooters in the campus and creating a zero-emission vehicle alternative
- To use environmentally friendly and zero-emission transportation systems throughout the campus in an integrated way.

Unit Transportation

Major programs/activities regarding low carbon campus initiatives are currently under transportation within the campus zone, as well as for travel. A unit so-called Transportation is working on the several processes which currently operating for:

- Booking of vehicles for staff traveling.
- Services of logistics for staff/student/public
- Training and competencies course related to vehicles.
- Data record for fuel consumption every month.

- Inspection of PNU vehicles.

AIOU campus sustainability is working closely with the unit in order to assist a few strategies of low carbon implementation, such as:

- Car-free day once a month.
- Provide free public transportation to the university community.
- Limitation of institutional vehicles that use gasoline as fuel.
- Acquisition of vehicles with less carbon emission (electric vehicle - EV).
- Planning of the pedestrian zone and allocation of electric vehicle services.
